

Are you using Authorize.net?

Do you want those payments to be processed through Print Reach Pay?

We have a solution!

The Print Reach Pay Authorize.net Emulator

Your next step is to contact the vendor supplying the product using Authorize.net and provide them with the requirements below.

Any questions about this process, please contact support@printreach.com

Instructions for your Vendor:

The following requirements must be met to take advantage of the Print Reach Pay Authorize.net Emulator.

1. Your product must integrate with Authorize.net using the “AIM” or “Authorize.net” API. The “CIM” API is not supported. Authorize.net has several APIs. Reference: https://developer.authorize.net/api/upgrade_guide.html
2. Your product must be able to direct Authorize.net traffic to a different Endpoint URL on a customer-by-customer basis.
3. Once you’ve satisfied the requirements above, contact support@printreach.com and we will grant you the test endpoint URL and credentials.
4. Once your testing is complete, our mutual customer should start a support ticket with our team (support@printreach.com) and request the Authorize.net emulator endpoint and credentials, which they will supply back to you.
